<current>

<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'torchfont/torchfont' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/torchfont/torchfont (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-04-03T06:34:59.333Z</current_datetime>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
[codex] Feed metadata from native style rows
</pr_title>

<pr_description>
Summary
- expose aligned style metadata rows directly from the Rust dataset backend
- make `build_dataset_metadata(...)` consume a single style-row input instead of split name/source lists
- route `GlyphDataset.metadata` through the native rows and add regression tests for the stateless path

Testing
- mise run format

```
- mise run check
- mise run test

</pr_description>

<stacked_pr_context>
The pull request you are currently working on is a stacked pull
request on top of another pull request. The base branch is
`refactor/142-metadata-surface`, not the default branch `main`.
A pull request has already been created for your branch. Do not
attempt to create a new pull request. If you are asked to fix
CI, build, test, or workflow failures, check the GitHub Actions
workflow runs for the original branch (`refactor/142-metadata-
surface`) first. If you don't find relevant failures there, then
check your branch (`refactor/144-native-style-rows`).
</stacked_pr_context>

## Comments on the PR (you are @copilot in this section)

----
The last **1** git commits in this branch are the changes you
have made so far. Use those as your change commit history.
</problem_statement><rules_for_making_changes>
* Start by fully understanding <problem_statement> and the
<comments> before making any changes. You will only address the
<comment_new> comments. Reply to new comments as you address
them. Ignore comments that are not actionable or directed at
you.
* For each new comment, determine:
    - If it a request for changes, a question on the code or a
suggestion.
    - Is it addressed to you or someone else, e.g. "Hey
@username, ..." or "@username can you ...".
```

```
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you
can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment
and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

A **CI/Build Failure** has been mentioned in the problem
statement, make sure to follow your instructions for addressing
CI/Build Failures.
```
