<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'OpenRakis/Spice86' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/Spice86/Spice86 (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-05-03T15:00:06.483+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Implement IMGMOUNT DOS batch command and backend plumbing
</pr_title>

<pr_description>
- [ ] Backend: `IMscdexService` interface + `MscdexService.AddDrive` (mutable drive list)
- [ ] Backend: `DosDriveManager.MountFolderDrive` + `MountCdRomDrive` + `CdRomMountedEventArgs` + `CdRomMounted` event
- [ ] Backend: Rework `DosProgramLoader` ad-hoc C: path resolution via `DosDriveManager`
- [ ] Backend: `IMGMOUNT` batch command (ISO/CUE image mount)
- [ ] Backend: `MOUNT` batch command (folder mount with -t cdrom/floppy/hdd)

- [ ] Backend: DI wiring — `MscdexService` construction + pass to `Dos` → `DosProcessManager` → `DosBatchExecutionEngine`
- [ ] UI: `StatusBarGroup` collapsible control
- [ ] UI: `CdRomDriveViewModel` + `CdRomStatusViewModel`
- [ ] UI: `CdRomStatusUserControl` + `MainWindow.axaml` restructuring
- [ ] UI: DI wiring (`CdRomStatusViewModel` → `MainWindowViewModel`)
- [ ] Tests: `ImgMountCommandTests` + `MountCommandTests` + `CdRomDriveViewModelTests`
</pr_description>

<prev_assistant>

All work is complete. Here's a summary of what was implemented:

Summary

CodeQL Issues Fixed
- **CdRomDrive.cs**: `GetTrackInfo` foreach with null-check → `FirstOrDefault` LINQ
- **CueBinImage.cs**: `FindFirstDataTrack` + `FindTrack` implicit-filter foreach → `FirstOrDefault`
- **CueSheetParser.cs**: foreach that maps `rawLine → line.Trim()` →

`.Select()` LINQ; `Path.Combine` with possible rooted second arg → `Path.GetFullPath(raw, cueDir)`
- **MscdexService.cs**: if/else that sets same var both branches → direct assignment; two TryGet* foreach-with-filter → `FirstOrDefault`

MSCDE sector
- `FatDirectoryEntry` — parses 32-byte directory entries (file/directory/volume-label/deleted)
- `Fat12FileSystem` — reads cluster chains, lists root directory, reads files by entry
- `FloppyDiskDrive` — extended with `MountImage()`, `HasImage`, and `GetFileSystem()`
- `DosDriveManager` — `MountFloppyImage()`, `MountFloppyFolder()` (with debug logging), `MountFolderDrive()`, `TryGetFloppyDrive()`, `FloppyDrives`
- `DosFileManager` — floppy-image file-open code path

MOUNT / IMGMOUNT Batch Commands
- `MOUNT <drive> <path> [-t hdd|floppy]` — mounts a host folder as a DOS drive
- `IMGMOUNT <drive> <image> [-t floppy|iso|cue]` — mounts a disk image (extension auto-detected: `.img`/`.ima`/`.vfd`→floppy, `.iso`→iso, `.cue`→cue)

UI Drive Status Indicators (Polling)
- `DriveStatusViewModel` — polls `IDriveStatusProvider.GetDriveStatuses()` every second
- `DriveStatusUserControl.axaml` — pill-shaped indicator per mounted drive in the status bar
- `MediaPresenceBrushConverter` — green/grey brush based on media-present flag
- `MainWindow.axaml` — drive status bar item, hidden when no `DriveStatusViewModel`

Tests (34 new, all green, 1792 total)
- `BiosParameterBlockTests` (5), `FatDirectoryEntryTests` (6), `Fat12FileSystemTests` (9)
- `DosDriveManagerFloppyTests` (6), `MountBatchCommandTests` (8)
- `Fat12ImageBuilder` — in-memory 1.44 MB floppy image builder for tests

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Implement MOUNT/IMGMOUNT batch commands, FAT12 floppy support, and MSCDEX architecture rework
</pr_title>

<pr_description>
Description of Changes

CodeQL fixes:
- `CdRomDrive.GetTrackInfo`: implicit-filter foreach → `FirstOrDefault`
- `CueBinImage.FindFirstDataTrack` + `FindTrack`: implicit-filter foreach → `FirstOrDefault`
- `CueSheetParser`: foreach mapping `rawLine → line.Trim()` → `.Select()`; `Path.Combine` with possible rooted second argument → `Path.GetFullPath(raw, cueDir)`
- `MscdexService.GetNumberOfCdRomDrives`: both-branch assignment → direct initialisation; `TryGetDrive`/`TryGetDriveByLetter` implicit-filter foreach → `FirstOrDefault`

MSCDEX architecture rework:
- `MscdexService` is now owned and constructed by `Dos` (before `ProcessManager`), not injected from outside
- `Dos` implements `Spice86.Shared.Interfaces.IDriveStatusProvider` — the UI always polls, no events are emitted
- New shared types: `DosVirtualDriveType` enum, `DosVirtualDriveStatus`, `IDriveStatusProvider` interface (all in `Spice86.Shared`)

FAT12 floppy image support (TDD-first):
- `BiosParameterBlock` — parses the BIOS Parameter Block from a 512-byte FAT12 boot sector
- `FatDirectoryEntry` — parses 32-byte directory entries (file / directory / volume-label / deleted)
- `Fat12FileSystem` — reads cluster chains, lists the root directory, and reads file data from an image
- `FloppyDiskDrive` — extended with `MountImage()`, `HasImage`, and `GetFileSystem()`
- `DosDriveManager` — new methods: `MountFloppyImage()`, `MountFloppyFolder()` (with debug logging), `MountFolderDrive()`, `TryGetFloppyDrive()`, `FloppyDrives`
- `DosFileManager` — added floppy-image file-open code path

MOUNT / IMGMOUNT batch commands:
- `MOUNT <drive> <path> [-t hdd|floppy]` — mounts a host folder as a DOS drive letter
- `IMGMOUNT <drive> <image> [-t floppy|iso|cue]` — mounts a disk image; extension is auto-detected (`.img`/`.ima`/`.vfd` → floppy, `.iso` → ISO, `.cue` → CUE/BIN)
- Both commands wired into `BatchCommandHandlers` and `DosBatchExecutionEngine`

UI drive status indicators (polling):
- `DriveStatusViewModel` — polls `IDriveStatusProvider.GetDriveStatuses()` every second; rebuilds the observable collection only when content changes
- `DriveStatusUserControl` — AXAML status-bar control showing one pill-shaped indicator per mounted drive
- `MediaPresenceBrushConverter` — green/grey brush based on the media-present flag
- `MainWindow.axaml` — new drive status bar item, hidden when no `DriveStatusViewModel` is set

Rationale behind Changes

The original PR introduced a `MscdexService` as an externally-injectable dependency, but the maintainer clarified that MSCDEX must be owned by `Dos` and exposed through a `Spice86.Shared` polling interface rather than events. This rework aligns the architecture with that principle.

FAT12 floppy image support was requested to complete the drive-abstraction story alongside CD-ROM and host-folder drives, mirroring DOSBox Staging's `IMGMOUNT` capability for floppy images.

```
The `MOUNT` and `IMGMOUNT` batch commands make the drive-
mounting functionality available inside the emulated DOS
environment (e.g., from `AUTOEXEC.BAT`), consistent with how
DOSBox Staging exposes these commands.

The UI drive status bar uses polling rather than events to
remain consistent with the pattern established by other
`DispatcherTimer`-based ViewModels in the codebase
(`CpuViewModel`, `PaletteViewModel`, etc.).

### Suggested Testing Steps

1. **Floppy image mount via IMGMOUNT:**
   - Add `IMGMOUNT A myFloppy.img -t floppy` (or `.ima` /
`.vfd`) to `AUTOEXEC.BAT`
   - Verify the drive appears in the status bar and files on the
image are accessible from DOS

2. **Folder mount via MOUNT:**
   - Add `MOUNT D /path/to/host/folder` to `AUTOEXEC.BAT`
   - Verify `D:` is accessible from the emulated DOS prompt

3. **CD-ROM image mount via IMGMOUNT:**
   - Add `IMGMOUNT D game.cue -t cue` or `IMGMOUNT D game.iso`
to `AUTOEXEC.BAT`
   - Verify the drive appears in the status bar with the correct
volume label

4. **Drive status bar:**
   - Launch with any mounted drive and confirm the status bar
shows a labelled pill for each drive
   - Indicators should update within one second of a mount/
unmount event

5. **Unit tests:**
   - `dotnet test tests/Spice86.Tests/Spice86.Tests.csproj` —
all 1 792 tests must pass
   - Key test classes: `BiosParameterBlockTests`,
`FatDirectoryEntryTests`, `Fat12FileSystemTests`,
`DosDriveManagerFloppyTests`, `MountBatchCommandTests`
</pr_description>

<author>@copilot</author>

> @copilot implement full emulated floppy disk drive support, including images, fat understanding, UI controls and indicators for the drives and with full TDD driven developpement.
>
> All from:...

Addressed in commits 79c57a4 and d5c8f5e:

FAT12 floppy support (TDD-first):
- `BiosParameterBlock` — parses the BIOS Parameter Block from a FAT12 boot sector
- `FatDirectoryEntry` — parses 32-byte directory entries (file/

dir/volume-label/deleted)
- `Fat12FileSystem` — reads cluster chains, lists directories, reads file data from a floppy image
- `FloppyDiskDrive` extended with `MountImage()` and `GetFileSystem()` accessor
- `DosDriveManager` — `MountFloppyImage()`, `MountFloppyFolder()` (with debug logging), `MountFolderDrive()`, `TryGetFloppyDrive()`
- `DosFileManager` — floppy image file-open code path
- 27 TDD tests in `BiosParameterBlockTests`, `FatDirectoryEntryTests`, `Fat12FileSystemTests`, `DosDriveManagerFloppyTests`

MSCDEX architecture rework (as requested):
- `MscdexService` is now owned by `Dos` — constructed before `ProcessManager`, not passed from DI
- `Dos` implements `Spice86.Shared.Interfaces.IDriveStatusProvider` — UI always polls, no events

MOUNT / IMGMOUNT batch commands:
- `MOUNT <drive> <path> [-t cdrom|floppy|hdd]` — mounts a host folder
- `IMGMOUNT <drive> <image> -t floppy|iso|cue` — mounts a disk image (extension auto-detected)
- 8 integration tests in `MountBatchCommandTests`

UI drive status indicators (polling):
- `DriveStatusViewModel` — polls `IDriveStatusProvider` every second
- `DriveStatusUserControl` (AXAML) — one pill-shaped indicator per mounted drive in the status bar
- `MediaPresenceBrushConverter` — green/grey based on media-present flag
- `MainWindow.axaml` — drive status bar item wired to `DriveStatusViewModel`
