<request>

You are working on a task in the 'HalFrgrd/flyline' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/flyline/flyline (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-04-23T17:21:57.380+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>
in Unicode helpers, the octant, sextant and quadrant should all have a function "from_grid". this takes a 2d grid of bools and converts that into a Vec of strings.
if the grid is 4 or fewer rows tall, then octant from grid should output of a Vec if a single line since they all fit on that line. for sextant, that would output a Vec of two lines, the second line would only have "cells" filled in the top third if any.
the lines might be different lengths.
use the from_grid for the python animation and the easing function animation.
make a pr
</problem_statement>

First, determine whether the <problem_statement> requires code changes, an explanation, a plan, or analysis. Then follow the appropriate path:

If the task requires code changes:

**If the task is a question or only requires creating a plan or

```
   analysis:** respond directly without making code changes.
```
