Consider the following problem statement:

<problem_statement>

This section details on the original issue you should resolve

<issue_title>Add a test for RTMA-RU</issue_title>
<issue_description>### Describe the feature

We really should have an ingest test for this repo, and since RTMA is such as fast/low memory ingest and doesn't need wgrib2, it's the perfect starting point. Add a test, running on dev branch PRs, that checks if the RTMA-RU_Local_Ingest.py runs successfully. It should setup the environment using the Docker/requirements-ingest.txt file, and run the RU_Local_Ingest.py script.

Acknowledgements

- [x] This issue is related to the self-hosting code and not an API or Home Assistant feature request.
- [x] I have written an informative title.</issue_description>

```

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.

Ensure that you lint, build and test early and iteratively to validate each code change thoroughly.
