Consider the following problem statement:

<problem_statement>
Problem

The `edgeTxPrs` GraphQL query in `src/shared/backend/graph/firmware/github.ts` currently fetches pull requests from the GitHub API without specifying the `per_page` parameter. This means it uses GitHub's default of 30 PRs, limiting the number of pull requests shown in the PrTargetForm component.

Solution

Add the `per_page: 100` parameter to the GitHub API call in the `edgeTxPrs` query resolver to increase the limit from 30 to 100 pull requests.

File to Modify

File: `src/shared/backend/graph/firmware/github.ts`

Location: In the `edgeTxPrs` field resolver, around line 127

Current code:
```typescript
edgeTxPrs: t.field({
  type: [EdgeTxPr],
  resolve: async (_, __, { github }) => {
```

```
    const prs = await github("GET /repos/{owner}/{repo}/pulls",
{
      owner: config.github.organization,
      repo: config.github.repos.firmware,
      sort: "created",
      state: "open",
      direction: "desc",
    });

    return prs.data.map((pr) => ({
      id: pr.number,
      name: pr.head.label,
      headCommitId: pr.head.sha,
      title: pr.title,
      description: pr.body ?? null,
    }));
  },
}),
```

Required change:
Add `per_page: 100,` to the parameters object passed to the GitHub API call, after the `direction: "desc",` line.

This will allow users to see up to 100 open pull requests instead of just 30.
</problem_statement>

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.
