Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Update French translation file with 102 missing keys
</pr_title>

<pr_description>
The French translation file was missing translation keys for recently added features including processor/graphical presets, OSC identifiers, document info panel, and plugin metadata.

Changes

- **Added 102 missing translations** extracted via `PartielsExtractTranslationKeys` CMake target
- **Removed 23 obsolete translations** no longer referenced in source code
- **Fixed 5 untranslated JUCE framework strings** (Left, Create Folder, Use up-down dragging, Show descriptions only, No)
- **Total: 825 translations** (up from 747)

Key additions

New translations cover:
- Processor/graphical preset management (`PROCESSOR`, `GRAPHICAL`, `Load processor preset from file...`, `Save as graphic preset...`)
- OSC configuration (`OSC Identifier`, `Set track OSC identifier`)
- Document metadata (`Document Info`, `Edit document description`, `Type information about the document`)
- Plugin details (`Category`, `Feature`, `Version`, `Maker`)
- Audio file info (`The format of the audio file`, `The duration of the audio file in seconds`, `The number of bits per samples of the audio file`)

All translations follow existing style conventions with proper French technical terminology and escaped quotes for parameterized strings (e.g., `\"GROUPNAMES\"`, `\"TRACKNAMES\"`).

<issue_title>Update french translation</issue_title>
><issue_description>The file is located in `BinaryData/Translations/French.txt`.
> There is a CMake target to extract the translation key named PartielsExtractTranslationKey that generates the file build/Scripts/TranslationKeys.txt.

@copilot Can you find in the code if there is text that should be translated, but with missing juce::translate()? And update the code and the translation accordingly?

* For each new comment, determine:
    - If it a request for changes, a question on the code or a suggestion.
    - Is it addressed to you or someone else, e.g. "Hey @username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

Ensure that you lint, build and test early and iteratively to validate each code change thoroughly.

<prev_assistant>

Perfect! The code review found no issues. Let me create a final summary of all the work done:

Summary

I successfully addressed the comment from @pierreguillot to find and fix text that should be translated but was missing `juce::translate()` calls.

What I Did

1. **Searched the codebase** for user-visible strings not wrapped in translation calls
   - Searched through 197 source files
   - Focused on UI methods like `setTooltip()`, `setButtonText()`, `setText()`, etc.

2. **Found 2 strings that needed translation:**
   - "The time position of the playhead" - tooltip in transport display
   - "Track(s): " - tooltip prefix in group property section

3. **Fixed the code:**
   - Added `juce::translate()` wrappers to both strings
   - Modified `Source/Document/AnlDocumentTransportDisplay.cpp`
   - Modified `Source/Group/AnlGroupPropertyProcessorsSection.cpp`

4. **Updated French translations:**
   - Added "La position temporelle de la tête de lecture" for the playhead position
   - Added "Piste(s) : " variant with trailing space for proper formatting

5. **Verified the changes:**
   - Successfully built the project
   - Tested the application runs correctly
   - Code review passed with no issues

Strings Intentionally Not Translated
- "Ircam" (proper noun/brand name)
- "????" (SDIF placeholder, not user-facing)
- " - " (formatting character)
- "+" (universal symbol)

All changes are committed in **d38e7e9** and the PR has been updated.

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Update French translation file and add missing juce::translate() calls
</pr_title>

<pr_description>
The French translation file was missing translation keys for recently added features including processor/graphical presets, OSC identifiers, document info panel, and plugin metadata. Additionally, some user-visible strings in the codebase were missing `juce::translate()` wrappers.

Changes

- **Added 102 missing translations** extracted via `PartielsExtractTranslationKeys` CMake target
- **Removed 23 obsolete translations** no longer referenced in source code

```
- **Fixed 5 untranslated JUCE framework strings** (Left, Create
Folder, Use up-down dragging, Show descriptions only, No)
- **Added 2 missing `juce::translate()` calls** for user-visible
strings in the source code
- **Total: 826 translations** (up from 747)

## Key additions

New translations cover:
- Processor/graphical preset management (`PROCESSOR`,
`GRAPHICAL`, `Load processor preset from file...`, `Save as
graphic preset...`)
- OSC configuration (`OSC Identifier`, `Set track OSC
identifier`)
- Document metadata (`Document Info`, `Edit document
description`, `Type information about the document`)
- Plugin details (`Category`, `Feature`, `Version`, `Maker`)
- Audio file info (`The format of the audio file`, `The duration
of the audio file in seconds`, `The number of bits per samples
of the audio file`)
- Transport display tooltips (`The time position of the
playhead`)

## Code changes

Added `juce::translate()` wrappers for 2 previously untranslated
user-visible strings:
- "The time position of the playhead" tooltip in `Source/
Document/AnlDocumentTransportDisplay.cpp`
- "Track(s): " tooltip prefix in `Source/Group/
AnlGroupPropertyProcessorsSection.cpp`

All translations follow existing style conventions with proper
French technical terminology and escaped quotes for
parameterized strings (e.g., `\"GROUPNAMES\"`,
`\"TRACKNAMES\"`).

Fixes Ircam-Partiels/Partiels#243

<issue_title>Update french translation</issue_title>
&gt;<issue_description>The file is located in `BinaryData/
Translations/French.txt`.
&gt; There is a CMake target to extract the translation key
named PartielsExtractTranslationKey that generates the file
build/Scripts/TranslationKeys.txt.
&gt;</issue_description>

<author>@copilot</author>

> @copilot Can you find in the code if there is text that should be translated, but with missing juce::translate()? And update the code and the translation accordingly?

Found and fixed 2 untranslated user-visible strings:

1. **"The time position of the playhead"** tooltip in `AnlDocumentTransportDisplay.cpp` - wrapped in `juce::translate()` and added French translation "La position temporelle de la tête de lecture"

2. **"Track(s): "** tooltip prefix in `AnlGroupPropertyProcessorsSection.cpp` - wrapped in `juce::translate()` and added French translation "Piste(s) : "

I also examined several other strings that don't need translation (proper nouns like "Ircam", placeholders like

"????", formatting characters like " - ").

Fixed in commit d38e7e9.
