Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Add 99% coverage threshold for tests module
</pr_title>

<pr_description>
Enforce extremely high coverage (99% target, 1% threshold) for the `tests/` directory to detect when tests aren't executing properly or code is being skipped.

Changes

- Added `tests` coverage group to `codecov.yml` under `coverage.status.project`
- Configured with 99% target and 1% threshold (vs. 95%/5% for main project)
- Scoped to `tests/**` path pattern
- Set `if_no_uploads: error` and `only_pulls: false` for enforcement on all commits

```yaml
coverage:
  status:
    project:
      tests:
        target: 99%
        threshold: 1%
        paths:
          - "tests/**"
        if_no_uploads: error
        only_pulls: false
```

<issue_title>Mandate Extremely High Coverage for Tests Module</issue_title>

    - If it a request for changes, a question on the code or a
suggestion.
```

- Is it addressed to you or someone else, e.g. "Hey @username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

Ensure that you lint, build and test early and iteratively to validate each code change thoroughly.

<prev_assistant>

The analysis is complete. I've provided a detailed explanation to the user about why the tests directory has 97% coverage instead of 99%. The missing 3% is primarily from:

1. Error-handling branches in parametrized tests that have no error test cases
2. An unused test fixture
3. Some benchmark helper functions and mock class methods

The 99% threshold is working as intended - it's detecting that there's test infrastructure code that isn't being fully exercised. The user can now decide whether to:
- Add error test cases to boost coverage to 99%
- Remove unused fixtures
- Accept 97% as reasonable for test infrastructure
- Add `# pragma: no cover` comments to lines that don't need coverage

Since this is an explanation rather than a code change request, no additional modifications to the codebase are needed at this time.

> @copilot This should add coverage for the missing tests, can you try to increase the code coverage of the tests directory or explain why the coverage is only at 97.66%.

The tests directory coverage is at 97%, not 97.66%. I've analyzed the missing coverage and found it falls into these categories:

Uncovered Code Breakdown:

1. **Error-handling branches in parametrized tests** (~35 lines): Test functions have `if isinstance(expectation, Exception):` blocks to handle error test cases, but none of the current parametrized test cases actually test error conditions. Files affected:
   - `test_parameter_types.py`: 14 lines (82% coverage)
   - `test_calibrators.py`: 6 lines (90% coverage)
   - `test_validation.py`: 12 lines (93% coverage)
   - `test_encodings.py`: 4 lines (94% coverage)
   - `test_comparisons.py`: 2 lines (96% coverage)
   - `test_definitions.py`: 3 lines (98% coverage)

2. **Unused test fixture** (1 line): `clarreo_test_data_dir` in `conftest.py` is defined but never used (no CLARREO test data exists)

3. **Benchmark helper functions** (4 lines): Nested setup/wrapper functions in `test_slow_benchmarks.py` and internal mock classes in `test_validation.py`

4. **Other test helpers** (2 lines): Helper methods and test utilities in `test_common.py` and `test_suda_parsing.py`

```
**Recommendation**: The 99% threshold is working as intended -
it's detecting that test infrastructure code exists but isn't
being exercised. To reach 99%, we'd need to either:
- Add error test cases to parametrized tests
- Remove the unused `clarreo_test_data_dir` fixture
- Add `# pragma: no cover` to legitimately uncoverable lines

This is test infrastructure, not production code, so the current
97% may be acceptable. The threshold will catch if actual test
code stops running.
