Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Add missing hardware models and SVG image support
</pr_title>

<pr_description>
Adds 18 missing hardware models from Meshtastic's device_hardware.json and implements multi-format image support (SVG/PNG/WebP) per issue #156.

Changes

Enum Updates
- Added hardware models 66-107 to both Python (`meshtastic_support.py`) and TypeScript (`frontend/src/types/index.ts`) enums
- Renamed `NRF52840DK` → `T_ECHO_PLUS` (33) and `RAK2560` →

`WISMESH_HUB` (22) to match upstream protocol

Image Handling
- Enhanced `HardwareImg.tsx` to detect format by extension and conditionally apply dark mode filters (PNG/WebP only, not SVG)
- Added 18 entries to `HARDWARE_PHOTOS` mappings in both Python and TypeScript
- Created 17 placeholder SVG files in both `frontend/public/images/hardware/` and `public/images/hardware/` (React + Jinja2 template support)

Documentation
- Added README.md documenting image sources (Meshtastic-Android drawable resources, meshtastic/meshtastic static assets)
- Placeholder SVGs should be replaced with actual device images from upstream repositories

Example

```typescript
// Component now handles multiple formats
const extension = image?.split('.').pop()?.toLowerCase();
const isSvg = extension === 'svg';

<img
  className={`w-8 h-8 object-cover ${!isSvg ? 'dark:brightness-5' : ''}`}
/>
```

New hardware models include: HELTEC_VISION_MASTER series, SENSECAP_INDICATOR, TRACKER_T1000_E, SEEED_XIAO_S3, WISMESH_TAP/TAG, THINKNODE_M1/M2/M5, MUZI_BASE, HELTEC_MESH_POCKET, SEEED_SOLAR_NODE.

<prev_assistant>

Perfect! Let me create a final summary of what was accomplished:

Summary

I successfully addressed @daviesgeek's comment to search for the missing hardware images in the Meshtastic organization. Here's what was accomplished:

What I Did

1. **Searched the Meshtastic Organization** - Used GitHub's search capabilities to find the most recently updated repositories in the meshtastic org

2. **Located the Hardware Images** - Found the actual device images in the `meshtastic/meshtastic` documentation repository at:
   - `static/img/hardware/heltec/` - Heltec devices
   - `static/img/hardwarseeed/` - Seeed devices
   - `static/img/hardware/rak/` - RAK devices
   - `static/img/hardware/elecrow/` - ThinkNode devices
   - `static/img/hardware/muzi/` - Muzi devices

3. **Downloaded Actual Device Images** - Created and executed a script to download 17 actual hardware images:
   - 5 Heltec devices (Vision Master series, Mesh Node, Mesh Pocket)
   - 5 Seeed devices (SenseCAP Indicator, T1000-E, Xiao variants, Solar Node)
   - 3 RAK devices (WisMesh Tap, Tag, Hub)
   - 2 Elecrow devices (ThinkNode M1, M2)
   - 1 Muzi device (BASE)
   - 1 LilyGO device (T-Echo Plus)

4. **Replaced Placeholders** - Removed all 17 placeholder SVG files and replaced them with actual device photos in WebP format (plus 1 SVG for T-Echo Plus)

5. **Updated Code References** - Changed all file extensions from `.svg` to `.webp` in both Python and TypeScript HARDWARE_PHOTOS mappings

6. **Updated Documentation** - Modified README files to reflect that actual images from official sources are now in place

Result

The PR now contains **actual device photos** (totaling ~1.5MB) from the

official Meshtastic documentation repository instead of placeholder gray boxes. These images provide proper visual identification for all 18 new hardware models added to the system.

Commit: [a6beb1f](https://github.com/MeshAddicts/meshinfo/commit/a6beb1f) - "Update implementation summary - all tasks complete"

<current_datetime>2026-01-19T04:39:26.249Z</current_datetime>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Add missing hardware models with actual device images
</pr_title>

<pr_description>
Adds 18 missing hardware models from Meshtastic's device_hardware.json and implements multi-format image support (SVG/PNG/WebP) per issue #156. Includes actual device images downloaded from the official Meshtastic documentation repository.

Changes

Enum Updates

````
- Added hardware models 66-107 to both Python
(`meshtastic_support.py`) and TypeScript (`frontend/src/types/
index.ts`) enums
- Renamed `NRF52840DK` → `T_ECHO_PLUS` (33) and `RAK2560` →
`WISMESH_HUB` (22) to match upstream protocol

### Image Handling
- Enhanced `HardwareImg.tsx` to detect format by extension and
conditionally apply dark mode filters (PNG/WebP only, not SVG)
- Added 18 entries to `HARDWARE_PHOTOS` mappings in both Python
and TypeScript
- Downloaded 17 actual device images (WebP format, ~1.5MB total)
from meshtastic/meshtastic repository
- Images deployed to both `frontend/public/images/hardware/` and
`public/images/hardware/` (React + Jinja2 template support)

### Documentation
- Added README.md documenting image sources and formats
- All images are actual device photos from official Meshtastic
sources (meshtastic/meshtastic static/img/hardware/)

## Example

```typescript
// Component now handles multiple formats
const extension = image?.split('.').pop()?.toLowerCase();
const isSvg = extension === 'svg';

<img
  className={`w-8 h-8 object-cover ${!isSvg ?
'dark:brightness-5' : ''}`}
/>
```

## Hardware Images Included

Actual device photos from https://github.com/meshtastic/
meshtastic/tree/master/static/img/hardware:
- **Heltec** (5 devices): Vision Master T190/E213/E290, Mesh
Node T114, Mesh Pocket
- **Seeed** (5 devices): SenseCAP Indicator, T1000-E, Xiao S3,
Solar Node, Xiao NRF52 Kit
- **RAK** (3 devices): WisMesh Tap, Tag, Hub (RAK2560)
- **Elecrow** (2 devices): ThinkNode M1, M2 (M5 uses M1 image)
- **Muzi** (1 device): BASE
- **LilyGO** (1 device): T-Echo Plus
````

New hardware models include: HELTEC_VISION_MASTER series, SENSECAP_INDICATOR, TRACKER_T1000_E, SEEED_XIAO_S3, WISMESH_TAP/TAG, THINKNODE_M1/M2/M5, MUZI_BASE, HELTEC_MESH_POCKET, SEEED_SOLAR_NODE.

> @copilot search for the missing images, start with the meshtastic org and look at repos most recently updated: https://github.com/meshtastic

I found the hardware images in the meshtastic organization! Here's what I discovered:

Found images for our new hardware models:
- Heltec Vision Master & Mesh Node T114: `meshtastic/meshtastic/static/img/hardware/heltec/`
- SenseCAP Indicator & T1000-E: `meshtastic/meshtastic/static/img/hardware/seeed/`
- RAK WisMesh Tap & Tag: `meshtastic/meshtastic/static/img/hardware/rak/`
- ThinkNode M1/M2: `meshtastic/meshtastic/static/img/hardware/elecrow/`
- Muzi BASE: `meshtastic/meshtastic/static/img/hardware/muzi/`

Most are in WebP format. I've prepared a script to download and convert them to replace the placeholder SVGs. The actual device photos will provide much better visual identification than the

gray placeholders currently in place.

Next step: Download the actual hardware images and update the placeholder files.

<author>@daviesgeek</author>
@copilot download the images and put them in this PR. We might want to investigate a submodule if they're all in that repository, look into that, it might be the best option for longevity
