Consider the following problem statement:

<problem_statement>

This section details on the original issue you should resolve

<issue_title>Incidents do not get handled correctly on job worker to Camunda user task migration</issue_title>
<issue_description>### Description

When migrating a job-worker user task to a Camunda user task, an incident that occurred in the job worker is migrated to the new element instance and not cleaned up when the job is cancelled. This leads to the incident still being present in the zeebe state for the job, as well as on the element instance to incident mapping.

Needs to be backported to 8.8.

Steps to reproduce

1. Deploy a process with job-worker user task and wait for the job to be created (this means we can't use incidents created by invalid forms, because in that case the job does not get created)

2. Fail the job-worker job
3. Migrate the user task (that now has an incident) to a Camunda user task

Current behavior

The migrated user task has an incident related to the job failure. Retries to resolve the incident fail since the job is not active anymore (it has been cancelled)

Expected behavior

There are no incidents related to the cancelled job worker on the migrated task (neither in the zeebe state, nor in secondary storage).

Workaround

No known workaround.

Environment

SaaS & SM

Version

- Component Version: 8.8.19, 8.9.0-rc1

Rootcause

During the migration the job for the job worker gets canceled but this does not remove any incidents related to the job from the state. Instead the incident is also migrated to the new user task

Solution ideas

1. Resolve any incidents on the job during the migration.
2. Prevent the incident from being migrated for this type of migration -> ensure the elementInstance does not contain a link to it anymore (check if it will still get cleaned up eventually)

□ Triage Assessment

Field	Value
Work type	BUG
Severity	🔥 High
Likelihood	⚠ Mid
Confidence	0.8

📝 Rationale

Engine-level bug in process instance migration from job-worker user tasks to Camunda user tasks leaves stale incidents tied to cancelled jobs with no known workaround on SaaS/SM 8.8.19 and 8.9.0-rc1, significantly impacting affected instances but limited to this specific migration scenario.

<comment_new><author>@mschoe</author>
@kristinkomschow / @marcosgvieira, are we planning to fix this for 8.9.0? </comment_new>
<comment_new><author>@kristinkomschow</author>
@mschoe I'd been told last week to prioritize planning for the new epics over fixing this, so my assumption was that we don't aim to fix it for 8.9.0.</comment_new>
