# 5227e536-0df5-40e8-ba01-0d346fb615a5

## <prev_user>

### <request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'msupply-foundation/open-msupply' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/open-msupply/open-msupply (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-02-25T04:28:50.016Z</current_datetime>

Consider the following problem statement:

<problem_statement>

---
*This section includes details on the pull request with code changes you have already submitted to fix the problem above.*

<pr_title>
Remove unnecessary name_link join declaration from purchase_order_line
</pr_title>

<pr_description>
Addresses review feedback on #10181:
`allow_tables_to_appear_in_same_query!(purchase_order_line, name_link)` was added unnecessarily.

The `manufacturer_id` field is resolved by the SQL view (`purchase_order_line_view`) via a DB-level join with `name_link` — no Diesel-level join between `purchase_order_line` and `name_link` is performed in application code, so the

declaration serves no purpose.

**Changes:**
- Remove `allow_tables_to_appear_in_same_query!
(purchase_order_line, name_link)` from
`purchase_order_line_row.rs`
- Remove the now-unused `name_link_row::name_link` import

## 🤖 Any notes for the reviewer?

No functional change — purely cleanup of a redundant Diesel
table relationship declaration.

# □ Testing

- [ ] Build passes (`cargo build -p repository`)

# 📃 Documentation

- [x] **No documentation required**: no user facing changes or a
bug fix which isn't a change in behaviour

# 📃 Reviewer Checklist

The PR Reviewer(s) should fill out this section before approving
the PR

**Breaking Changes**
- [ ] No Breaking Changes in the Graphql API
- [ ] Technically some Breaking Changes but not expected to
impact any integrations

**Issue Review**
- [ ] All requirements in original issue have been covered
- [ ] A follow up issue(s) have been created to cover additional
requirements

**Tests Pass**
- [ ] Postgres
- [ ] SQLite
- [ ] Frontend
</pr_description>

<stacked_pr_context>
The pull request you are currently working on is a stacked pull
request on top of another pull request. The base branch is

`2937-name-link-abstraction`, not the default branch `develop`. If you are asked to fix CI, build, test, or workflow failures, check the GitHub Actions workflow runs for the original branch (`2937-name-link-abstraction`) first. If you don't find relevant failures there, then check your branch (`copilot/sub-pr-10181-one-more-time`).
</stacked_pr_context>

* For each new comment, determine:
    - If it a request for changes, a question on the code or a suggestion.
    - Is it addressed to you or someone else, e.g. "Hey @username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

A **CI/Build Failure** has been mentioned in the problem statement, make sure to follow your instructions for addressing CI/Build Failures.

## <prev_assistant>

## Summary

Addressed the reviewer's request to remove all `allow_tables_to_appear_in_same_query!` declarations involving `name_link`.

**Changes made (27 files):**
- Removed ~34 `allow_tables_to_appear_in_same_query!(X, name_link)` declarations across the codebase
- Removed the associated unused `name_link` imports from files where `name_link` was only referenced by those declarations

**3 declarations kept (needed for compilation):**
1. `allow_tables_to_appear_in_same_query!(name, name_link)` in `name_row.rs` — required for `name_link::table.inner_join(name::table)` subqueries in `document.rs` and `purchase_order.rs`
2. `allow_tables_to_appear_in_same_query!(document, name_link)` in `document.rs` — required for document owner left joins
3. `allow_tables_to_appear_in_same_query!(latest_document, name_link)` in `document.rs` — same reason

Consider the following problem statement:

<problem_statement>

---
*This section includes details on the pull request with code changes you have already submitted to fix the problem above.*

<pr_title>
Remove unnecessary name_link join declarations across the codebase
</pr_title>

<pr_description>
Addresses review feedback on #10181: `allow_tables_to_appear_in_same_query!(X, name_link)` declarations were added unnecessarily across many row files. Where `name_link` resolution is handled at the SQL view level (e.g. `manufacturer_id` resolved via the view), there is no need for Diesel-level join declarations.

**Changes:**
- Remove ~34 `allow_tables_to_appear_in_same_query!(X, name_link)` declarations across the codebase
- Remove now-unused `name_link` imports from affected files
- Keep 3 declarations that are genuinely required for actual Diesel join queries to compile:
  - `allow_tables_to_appear_in_same_query!(name, name_link)` — required for `name_link::table.inner_join(name::table)` subqueries in `document.rs` and `purchase_order.rs`
  - `allow_tables_to_appear_in_same_query!(document, name_link)` and `allow_tables_to_appear_in_same_query!(latest_document, name_link)` — required for document owner left joins through `name_link`

## 🚀 Any notes for the reviewer?

No functional change — purely cleanup of redundant Diesel table relationship declarations. The 3 remaining `name_link` declarations are kept because they support actual Diesel-level joins (not just view-level resolution): `document.rs` uses `.left_join(name_link::table.inner_join(name::table))` to

resolve the document owner's name, and `purchase_order.rs` uses a `name_link::table.inner_join(name::table)` subquery to filter by supplier name string.

> @copilot+claude-sonnet-4.6 look for all
allow_tables_to_appear_in_same_query! with name_link and delete
them, there is no need to join in diesel name_link

Done in 61bfd35. Removed all ~34
`allow_tables_to_appear_in_same_query!(X, name_link)`
declarations and their associated unused imports.

Three declarations had to be kept because they're required for
actual Diesel join queries to compile:
- `allow_tables_to_appear_in_same_query!(name, name_link)` —
needed for `name_link::table.inner_join(name::table)` used in
`document.rs` and `purchase_order.rs` subqueries
- `allow_tables_to_appear_in_same_query!(document, name_link)`
and `allow_tables_to_appear_in_same_query!(latest_document,
name_link)` — needed for document owner left joins
(`.left_join(name_link::table.inner_join(name::table))`)
</comment_old>
