<request>

You are working on a task in the 'unrealandychan/Hermes-Agent-Cloud' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/Hermes-Agent-Cloud/Hermes-Agent-Cloud/unrealandychan/Hermes-Agent-Cloud (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-06-12T06:00:27.792+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>
CAN WE MAKE SOME CHANGES OR UPDATE ON THE DASHBOARD ? AND IF THAT'S BACKWARD CAPTIABLE TO OUR CURRENT SOLUTION ?
</problem_statement>

First, determine whether the <problem_statement> requires code changes, an explanation, a plan, or analysis. Then follow the appropriate path:

If the task requires code changes:

If the task is a question or only requires creating a plan or analysis: respond directly without making code changes.

<prev_assistant>

Here's what the dashboard currently has and what improvements can be made — all fully backward compatible since the dashboard is a purely static Next.js site that generates CLI commands without calling any backend APIs.

Current Dashboard (4 pages):
- `/dashboard` — Overview with 3 quick-start cards + install reminder
- `/dashboard/deploy` — 6-step wizard that builds a `hermes-agent-cloud deploy` command
- `/dashboard/commands` — Searchable CLI command reference
- `/dashboard/config` — Visual `hermes.yaml` config builder

<plan>

Dashboard Improvements (All Backward Compatiblehich works, but there's no visual affordance that completed steps are clickable). Add a tooltip/cursor hint.

6. UX: Dashboard Overview — show the Changelog inline
The repo has a `website/src/app/changelog` directory. Add a "What's New" link card on the overview page pointing to it, matching the 3-card grid pattern already in place.

7. UX: Mobile sidebar — add slide-out drawer
The current mobile layout only shows a plain horizontal nav in a top bar. Replace it with a hamburger-triggered drawer so long nav labels don't get clipped on small screens.

8. UX: Add breadcrumb trail inside dashboard pages
Each sub-page (Deploy, Commands, Config) has no breadcrumb. Add a lightweight breadcrumb line (e.g., `Dashboard > Deploy Wizard`) using the existing layout file.

Backward Compatibility:
Every single change above is a pure UI/UX change to the Next.js website. The dashboard generates CLI commands for users to copy and run locally — it calls no backend APIs, touches no Terraform, and has no runtime dependency on the CLI version. Adding a flag to the generated command string only benefits users; it doesn't break existing deploys. All changes can be shipped independently with zero risk to CLI, infra, or any deployed instances.

</plan>

Want me to implement any (or all) of these? I can start with the bug fix (#1) and the most impactful UX improvements if you'd like.

Consider the following problem statement:

<problem_statement>
Implement the plan:

Dashboard Improvements (All Backward Compatible)

1. Fix: Deploy Wizard — instance size not included in generated command
The `instanceSize` field is captured in the wizard state but `buildCommand()` never adds a `--size` flag to the output. The generated command silently drops the selection. Add `--size` to the built command for AWS/Azure/GCP.

2. Enhance: Command Reference — cloud provider filter buttons
Add toggle buttons (AWS / GCP / Azure / All) above the search bar so users can filter commands by cloud in addition to searching by text.

3. Enhance: Command Reference — copy button per command
Add a copy-to-clipboard button on each command card so users can copy an example command directly without selecting text.

4. Enhance: Config Builder — "Download as file" button
Add a `Download hermes.yaml` button alongside the existing "Copy YAML" button so users can save the file directly instead of pasting it manually.

5. Enhance: Deploy Wizard — step navigation improvement
Allow clicking already-completed steps in the progress bar to

jump back (currently only steps `<= current` are clickable, which works, but there's no visual affordance that completed steps are clickable). Add a tooltip/cursor hint.

6. UX: Dashboard Overview — show the Changelog inline
The repo has a `website/src/app/changelog` directory. Add a "What's New" link card on the overview page pointing to it, matching the 3-card grid pattern already in place.

7. UX: Mobile sidebar — add slide-out drawer
The current mobile layout only shows a plain horizontal nav in a top bar. Replace it with a hamburger-triggered drawer so long nav labels don't get clipped on small screens.

8. UX: Add breadcrumb trail inside dashboard pages
