@copilot Do a thorough review of this PR. Read ALL existing reviewer
comments above from Qodo, Coderabbit, and Gemini first — incorporate
their findings.

Review areas:
1. **Bloat check**: Are changes minimal and focused? Any unnecessary
code or scope creep?
2. **Security**: Any hardcoded secrets, unsafe eval/exec, missing
input validation?
3. **Performance**: Any module-level heavy imports? Hot-path
regressions?
4. **Tests**: Are tests included? Do they cover the changes
adequately?
5. **Backward compat**: Any public API changes without deprecation?
6. **Code quality**: DRY violations, naming conventions, error
handling?
7. **Address reviewer feedback**: If Qodo, Coderabbit, or Gemini
flagged valid issues, include them in your review
8. Suggest specific improvements with code examples where possible
