<request>

You are working on an issue in the 'dotnet/runtime' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/runtime/runtime (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2025-12-02T22:03:25.111Z</current_datetime>

Consider the following problem statement:

<problem_statement>
Examine the run.py test runner, and the wrapper cmd/sh scripts. Look at the logic that's duplicated across the cmd/sh scripts and move that into the .py script. The goal is to clean up the run.sh and run.cmd scripts so that they are purely thin wrappers around the python script (and could be removed entirely if desired).
</problem_statement>

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.

Ensure that you lint, build and test early and iteratively to validate each code change thoroughly.
