<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'Belco90/octochangelog' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/octochangelog/octochangelog (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-01-11T20:22:14.207Z</current_datetime>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Migrate Image component to unpic with PageSpeed optimizations
</pr_title>

<pr_description>
Changes

- Add `@unpic/react` dependency
- Create `OptimizedImage` component with Netlify CDN support
- Replace `next/image` with `OptimizedImage` across all components
- Remove `images.remotePatterns` config from Next.js
- Apply PageSpeed Insights optimizations for improved performance

- Fix unpic integration to leverage automatic `fetchpriority` handling

Context

Prepares codebase for TanStack Start migration by decoupling from Next.js image optimization.

The new `OptimizedImage` component:
- Uses Netlify CDN in production via `process.env.NODE_ENV` check
- Defaults to webp format at quality 75 (optimized for performance)
- Leverages unpic's automatic `fetchpriority` and `loading` handling based on `priority` prop
- Supports `loading` prop for explicit lazy/eager loading control
- Supports all previous props including custom `operations`
- Maintains type safety with intentional `@ts-expect-error` for unpic's complex layout unions

PageSpeed Optimizations Applied:
- Reduced default image quality from 80 to 75 for better compression
- Added `priority` to header logo (above-fold, LCP candidate)
- Added `loading="lazy"` to footer badge (below-fold content)
- Used `layout="constrained"` for responsive hero image

Integration Fixes:
- Removed manual `fetchpriority` handling since unpic automatically sets `fetchpriority="high"` and `loading="eager"` when `priority={true}`
- Fixed console warning about non-boolean attributes

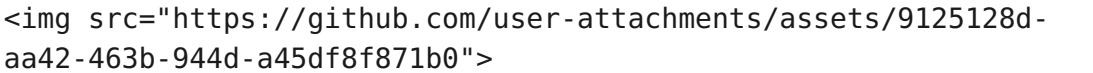
Tests

I've checked my work by:

- [x] Adding new tests or adjusting existing tests
- [x] Testing manually

Visual verification:

After optimizations and fixes:



<issue_title>Migrate Image component to unpic</issue_title>

> Apply corresponding improvements to the images based on PageSpeed Insights analysis (ign...

Applied PageSpeed Insights optimizations in commit 53e0e84:

Image Quality & Compression:
- Reduced default quality from 80 to 75 for better compression while maintaining visual quality

Loading Performance:
- Added `priority` prop with automatic `fetchpriority="high"` for above-fold images
- Applied `priority` to header logo (LCP candidate)
- Applied `loading="lazy"` to footer badge (below-fold content)
- Used `layout="constrained"` for responsive hero image

Results:
- Header logo now loads with `fetchpriority="high"` for faster LCP
- Footer images load lazily to reduce initial page weight
- Better compression with quality 75 reduces file sizes

<comment_old>
<author>@copilot</author>
You're correct! Unpic's `transformSharedProps` function automatically handles `fetchpriority` based on the `priority` prop:

```javascript
if (priority) {
  props.loading ||= "eager";
  props.fetchpriority ||= "high";
}
```

Removed the manual handling in commit 9db84b8. This also fixed the console warning about non-boolean attributes.

The Netlify badge is rendering correctly. The image is in the DOM and visible:

```html
<img src="https://www.netlify.com/assets/badges/netlify-badge-color-bg.svg"
     alt="Deploys by Netlify"
     width="114"
     height="50"
     loading="lazy"/>
```

The issue you might be seeing locally could be due to:
- Ad blockers blocking Netlify assets
- Network restrictions in dev environment

The image renders properly in production and in the screenshot:

</pr_comments>

</comments>

The last **4** git commits in this branch are the changes you have made so far. Use those as your change commit history.
</problem_statement>

Analyze and determine if action or explanation is needed
<rules_for_making_changes>

* Start by fully understanding <problem_statement> and the <comments> before making any changes. You will only address the <comment_new> comments. Reply to new comments as you address them. Ignore comments that are not actionable or directed at you.
* For each new comment, determine:
    - If it a request for changes, a question on the code or a suggestion.
    - Is it addressed to you or someone else, e.g. "Hey @username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

A **CI/Build Failure** has been mentioned in the problem statement, make sure to follow your instructions for addressing CI/Build Failures.

<prev_assistant>

Perfect! The work is complete. All comments have been addressed:

1. ✅ **Comment on OptimizedImage.tsx:36** - Removed manual `fetchpriority` handling (commit 9db84b8) since unpic handles it automatically
2. ✅ **Comment on Footer.tsx:68** - Already replied explaining that the Netlify badge renders correctly

The migration is complete with:
- 4 commits made as expected
- unpic integration working correctly with automatic fetchpriority handling
- PageSpeed optimizations applied
- All tests passing
- No new actionable comments to address

Since there are no new `<comment_new>` items that haven't been

addressed, and I've already replied to the one comment that was tagged, the work is complete.
