<prev_user>

<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'dadoonet/fscrawler' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/fscrawler/fscrawler (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Add support for static metadata in FSCrawler settings
</pr_title>

<pr_description>
This PR implements static metadata support for FSCrawler, allowing users to define metadata that gets applied to ALL documents without needing individual </pr_description>`.meta.yml` files in each directory.

Problem

Previously, adding consistent metadata to all documents required placing `.meta.yml` files in every directory being crawled. This

was cumbersome for operational metadata like hostname, environment, or data source information that should be the same across all documents from a crawler instance.

Solution

Added a new `staticTags` field to the `tags` configuration section that allows defining static metadata in the FSCrawler settings file:

```yaml
fs:
  url: "/path/to/docs"
tags:
  staticTags:
    external:
      hostname: "server001"
      environment: "production"
    custom:
      category: "documents"
      source: "filesystem"
```

Implementation Details

- **Tags Configuration**: Extended `Tags` class with `staticTags` field to hold static metadata
- **Document Processing**: Modified `FsParserAbstract.indexFile()` to apply static metadata after external metadata loading
- **Merging Logic**: Added `DocUtils.getMergedStaticDoc()` method to merge static metadata with documents
- **Priority System**: File-based `.meta.yml` metadata takes precedence over static metadata for conflicts
- **Testing**: Added comprehensive unit tests and integration tests to verify functionality

Configuration Structure

The static metadata is configured at the top level `tags` section (updated from the previous `fs.tags` structure for consistency with documentation):

```yaml
tags:
  meta_filename: ".meta.yml"  # Optional: for per-directory files
```

```
  staticTags:
    external:
      hostname: "web-serhing from one of these locations, you
can either:
&gt;
&gt; - Configure <a href="https://gh.io/copilot/actions-setup-
steps">Actions setup steps</a> to set up my environment, which
run before the firewall is enabled
&gt; - Add the appropriate URLs or hosts to the custom allowlist
in this repository's <a href="https://github.com/dadoonet/
fscrawler/settings/copilot/coding_agent">Copilot coding agent
settings</a> (admins only)
&gt;
&gt;

## Comments on the PR (you are @copilot in this section)

<comments>

<pr_comments>

<comment_new>
<comment_id>3257020096</comment_id>
<author>@dadoonet</author>
@copilot Could you also modify the example in </
comment_new></pr_comments></comments>`docs/source/admin/fs/
index.rst`:

```
   # optional: only needed if you want to change the default
settings
    tags:
      metaFilename: "meta_tags.json" # default is
".meta.yml"
```

The indentation is wrong and we should suppress one space.

Could you also add an integration test in the
`FsCrawlerTestExternalMetadataIT.java` file? This should add
a IT for static metadata only and another test for static
metadata plus a local `.meta.yml` file which overwrites one
of the static values.
You will need to create 2 new dirs in `integration-tests/
src/test/resources-binary/samples/`, depending on the test
```

```
method name.

<pr_title>

````
Add support for static metadata in FSCrawler settings
</pr_title>

<pr_description>
- [x] Complete static metadata implementation with documentation
and examples
- [x] Add comprehensive tests for static metadata
functionality
- [x] Add static metadata support to Tags configuration class
and update configuration structure
- [x] Fix indentation in docs/source/admin/fs/index.rst (remove
one space from tags section)
- [x] Remove static-metadata-example.md file (not needed per
review)
- [x] Add link to "Meta Filename" section in tags.rst
documentation
- [x] Add example showing .meta.yml precedence over static
metadata in tags.rst
- [x] Rename StaticMetadataIntegrationTest to StaticMetadataTest
- [x] Remove logger line and add mixed metadata test in
StaticMetadataTest
- [x] Add integration tests in FsCrawlerTestExternalMetadataIT
with sample directories
- [x] Fix Tags default initialization in FsSettingsLoader to
prevent null pointer exceptions

Note: There are some pre-existing test failures in the settings
module related to gestalt configuration parsing that need to be
investigated separately. These don't affect the core static
metadata functionality.
</pr_description>

...

Fixed indentation in `docs/source/admin/fs/index.rst` by removing one space from the tags section. Added integration tests `static_metadata_only()` and `static_metadata_with_override()` in `FsCrawlerTestExternalMetadataIT.java` with corresponding sample directories. (fe12998)
