Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
fix(tsconfig): align compiler settings with TypeScript 6
</pr_title>

<pr_description>
This PR updates repository TypeScript configuration to be compatible with the TypeScript 6 upgrade in the dependency bump PR. The previous config relied on TS5-era behavior and failed under TS6 compiler rules.

- **TS6 deprecation handling**
  - Moves `ignoreDeprecations` into `compilerOptions` and updates it to `6.0` in `tsconfig.json` so the current

declaration bundling flow remains valid during the TS6 transition.

- **MJS build config compatibility**
  - Adds explicit `rootDir` to `tsconfig-mjs.json` to satisfy TS6's stricter source/output layout requirements.

- **Net effect**
  - Keeps the existing build output structure and behavior, while making the compiler configuration valid for TypeScript 6.

```json
// tsconfig.json
{
  "compilerOptions": {
    "moduleResolution": "NodeNext",
    "ignoreDeprecations": "6.0"
  }
}

// tsconfig-mjs.json
{
  "compilerOptions": {
    "rootDir": "./src/",
    "outDir": "./dist/mjs/"
  }
}
```
</pr_description>

Pull request overview

Updates the project’s development tooling by bumping the TypeScript compiler version, ensuring the lockfile reflects the new resolved TypeScript package.

Changes:
- Bump `typescript` devDependency to `^6.0.3`.
- Update `package-lock.json` to resolve TypeScript `6.0.3` (including tarball URL and integrity).

Reviewed changes

Copilot reviewed 1 out of 2 changed files in this pull request and generated 1 comment.

File	Description
package.json	Updates the TypeScript devDependency version range to `^6.0.3`.
package-lock.json	Locks TypeScript to `6.0.3` and updates associated resolved/integrity metadata.

The PR title/description says TypeScript is being bumped from 5.9.3 → 6.0.3, but `package.json` was previously set to `^5.7.3` (while `package-lock.json` was at 5.9.3). Consider updating the PR title/description to reflect the actual `package.json` range

change to avoid confusion for reviewers and release notes.

Updated in `5b29322` to align with TypeScript 6: moved `ignoreDeprecations` to `compilerOptions` with value `"6.0"` and added `rootDir` in `tsconfig-mjs.json` so the build passes under TS6.

please also address all the CI failures.

keep working until the tool works correctly when you run it in typescript 6 and you have addressed the errors @copilot
