<request>

You are working on an issue in the 'martincostello/alexa-london-travel-site' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/alexa-london-travel-site/alexa-london-travel-site (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-03-03T16:08:27.487Z</current_datetime>

Consider the following problem statement:

<problem_statement>
There's still a test failing. See https://github.com/martincostello/alexa-london-travel-site/actions/runs/22630308238/job/65579779137?pr=4059.
</problem_statement>

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.

A **CI/Build Failure** has been mentioned in the problem statement, make sure to follow your instructions for addressing CI/Build Failures.

<prev_assistant>

The fix is pushed. Here's what was wrong and what was changed:

Problem

After saving preferences, `UpdatePreferencesAsync()` immediately called `WaitForSignedInAsync()`. But clicking "save-preferences" submits an HTML form that POSTs to `/update-line-preferences`, which the server processes and responds with a redirect back to the home page. During this navigation, `Locator("[data-id='sign-out']").WaitForAsync()` threw `TargetClosedException` ("Target page, context or browser has been closed") because the Playwright locator evaluator lost its connection to the frame mid-navigation.

Fix

Wrapped the `ClickAsync` in `Page.RunAndWaitForNavigationAsync()` — the standard Playwright pattern for actions that trigger navigation:

```csharp
// Before — TargetClosedException during the form POST → redirect navigation
await Navigator.Page.ClickAsync("[data-id='save-preferences']");
var page = new HomePage(Navigator);
await page.WaitForSignedInAsync();

// After — waits for navigation to complete first, then checks the element
await Navigator.Page.RunAndWaitForNavigationAsync(
    async () => await Navigator.Page.ClickAsync("[data-id='save-preferences']"));
var page = new HomePage(Navigator);
await page.WaitForSignedInAsync();
```

`RunAndWaitForNavigationAsync` blocks until the resulting navigation (including any server-side redirects) has fully committed and the page has loaded, so `WaitForSignedInAsync` then finds the sign-out button on the already-loaded page without any race condition.

Security summary
CodeQL found 0 alerts. No security vulnerabilities introduced.

</repository_context>

<current_datetime>2026-03-03T16:32:27.056Z</current_datetime>

Consider the following problem statement:

<problem_statement>
Using `IPage.RunAndWaitForNavigationAsync()` is obsolete and causes the build to fail. Use a non-obsolete alternative.
</problem_statement>

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.
