<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'github/gh-aw' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/gh-aw/gh-aw (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-05-12T23:06:17.675+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Bump AWF to v0.25.44 and add `firewall.effective-token-steering` compiler support
</pr_title>

<pr_description>
This updates gh-aw’s AWF integration from `v0.25.43` to `v0.25.44` and wires the new token-steering surface into compiler output. Per issue guidance, `--max-model-multiplier` follow-up work is intentionally excluded from this PR.

- **## ✨ Enhancement**
  - **Version + release alignment**
    - Bumped default AWF version to `v0.25.44`.
    - Recompiled lock/golden artifacts so generated workflows

````
now pin `0.25.44` images and AWF install version consistently.
  - **Compiler mapping for token steering**
    - Added support for frontmatter:
      - `firewall.effective-token-steering: true`
    - Propagates to AWF config as:
      - `apiProxy.enableTokenSteering: true`
    - Preserved this setting across string-engine import
normalization paths so it survives engine setup orchestration.
  - **Version gating + schema updates**
    - Added `AWFTokenSteeringMinVersion = v0.25.44` and gated
emission of `enableTokenSteering` for older pinned AWF versions.
    - Updated embedded AWF config schema copy to include
`apiProxy.enableTokenSteering`.
    - Extended main frontmatter schema to accept top-level
`firewall.effective-token-steering`.
  - **Spec-facing metadata/docs**
    - Added a patch changeset describing the AWF bump and token-
steering support addition.

```yaml
# workflow frontmatter
firewall:
  effective-token-steering: true
```

```json
// generated awf-config.json (apiProxy excerpt)
{
  "apiProxy": {
    "enabled": true,
    "enableTokenSteering": true
  }
}
```
</pr_description>

<comment_old>
<author>@copilot</author>

> @copilot enable feature flag on 30% of agentic workflows

Implemented in f055b9d. Enabled `firewall.effective-token-steering: true` on 5 of 16 centralized agentic command workflows (~31%), and recompiled their `.lock.yml` files so `apiProxy.enableTokenSteering` is active for that rollout slice.
</comment_old>

<comment_old>
<author>@copilot</author>

> @copilot enable this feature on 50% of daily agentic workflows

Implemented in 635dbdf. Enabled `firewall.effective-token-steering: true` on 27 of 53 `daily-*` workflows (~50.9%) and recompiled those `.lock.yml` files so `apiProxy.enableTokenSteering` is enabled for that rollout cohort.

Pull request overview

Updates gh-aw’s AWF integration to v0.25.44 and adds compiler/frontmatter support for `firewall.effective-token-steering`, emitting it into generated AWF config as `apiProxy.enableTokenSteering` with version gating.

Changes:
- Bump default AWF version to `v0.25.44` and refresh generated lock + golden artifacts to match.
- Add `firewall.effective-token-steering` parsing/schema support

and propagate to AWF config as `apiProxy.enableTokenSteering` (gated to AWF >= `v0.25.44`).
- Add unit tests for extraction, orchestration preservation, version gating, and schema validation.

Analyze and determine if action or explanation is needed
<rules_for_making_changes>
* Start by fully understanding <problem_statement> and the <comments> before making any changes. You will only address the <comment_new> comments. Reply to new comments as you address them. Ignore comments that are not actionable or directed at you.
* For each new comment, determine:
    - If it a request for changes, a question on the code or a suggestion.
    - Is it addressed to you or someone else, e.g. "Hey @username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

<system_reminder>

</system_reminder>

<prev_assistant>

Done — action was needed for the new comment, and I completed it.

What I changed
- Merged latest `origin/main` into the branch.
- Resolved merge conflict in:
  - `/home/runner/work/gh-aw/gh-aw/.github/workflows/daily-safe-output-optimizer.lock.yml`
- Recompiled the affected workflow from:
  - `/home/runner/work/gh-aw/gh-aw/.github/workflows/daily-safe-output-optimizer.md`
- Final merge commit: `6c9a695`

Validation run
- Targeted test:

```
  - `go test -v -timeout=3m -tags integration -run 'TestCompile|
TestPoutine' ./pkg/cli` ✅
- Secret scan on changed files ✅
- `parallel_validation` (Code Review + CodeQL) ✅ (no findings)

### PR comment reply
- Replied to comment `4435528351` with the commit hash and status.
```
