<request>

You are working on a task in the 'powerplanner/powerplannerapps' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/powerplannerapps/powerplannerapps (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-05-08T19:07:46.584+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>
On iOS, the edit with AI button in the calendar view toolbar primary commands is just showing up as text rather than an icon. I tried mapping the material design icon to the iOS "bolt" icon, but idk if I did it wrong?
</problem_statement>

First, determine whether the <problem_statement> requires code changes, an explanation, a plan, or analysis. Then follow the appropriate path:

If the task requires code changes:

If the task is a question or only requires creating a plan or analysis: respond directly without making code changes.

<system_reminder>You have the capability to call multiple tools in a single response.
For maximum efficiency, whenever you need to perform multiple independent operations, ALWAYS call tools simultaneously whenever

the actions can be done in parallel rather than sequentially (e.g. multiple reads/edits to different files). Especially when exploring repository, searching, reading files, viewing directories, validating changes. For example, you can read 3 different files in parallel, or edit different files in parallel. However, if some tool calls depend on previous calls to inform dependent values like the parameters, do NOT call these tools in parallel and instead call them sequentially (e.g. reading shell output from a previous command should be sequential as it requires the sessionID).</system_reminder>
