<current>

<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'microsoft/microsoft-ui-reactor' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/microsoft-ui-reactor/microsoft-ui-reactor/microsoft/microsoft-ui-reactor (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

Consider the following problem statement:

<problem_statement>
Fix the failing GitHub Actions job "Vulnerable packages"
Analyze the Actions logs, identify the root cause of the failure, and implement a fix.
Check run ID: 80926617028
Job URL: https://github.com/microsoft/microsoft-ui-reactor/actions/runs/27383838127/job/80926617028
</problem_statement><rules_for_making_changes>
* Start by fully understanding <problem_statement> and the <comments> before making any changes. Treat <comment_old> comments as context only and do not make changes solely to satisfy them.
* Only act on <comment_new> comments that explicitly mention you (@copilot). To understand the context of comments that explicitly mention you, you may use other comments that do not explicitly mention you. Do not act on comments that don't explicitly mention you or reply to them, even if they are marked as <comment_new>.
* If the PR author has pushed back on or rejected a suggestion

```
in a thread, do not act on that thread.
* For each comment you decide to act on, determine:
    - If it is a request for changes, a question on the code, or
a suggestion.
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you
can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment
and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

<system_reminder>

</system_reminder>

A **CI/Build Failure** has been mentioned in the problem
statement, make sure to follow your instructions for addressing
CI/Build Failures.
```

<prompt>

```
Fix the failing GitHub Actions job "Vulnerable packages"
```
