<request>

You are working on a task in the 'AvaloniaUI/Avalonia' repository.

<repository_context>
I've cloned the repository in the directory /tmp/workspace/AvaloniaUI/Avalonia (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-05-22T04:12:28.879+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>
1 I can fix on my own, but for 2 would be nice
</problem_statement>

First, determine whether the <problem_statement> requires code changes, an explanation, a plan, or analysis. Then follow the appropriate path:

If the task requires code changes:

If the task is a question or only requires creating a plan or analysis: respond directly without making code changes.

<prev_assistant>

<plan>Great — for **#20798**, I'd fix it by tightening selection fallback logic in `SelectingItemsControl`:

1. In `/tmp/workspace/AvaloniaUI/Avalonia/src/Avalonia.Controls/Primitives/SelectingItemsControl.cs`, remove the fallback that treats unrealized `ItemsView` entries as selectable during first-item resolution.
2. Ensure "auto-select first item" only considers **realized

containers** that are both visible and enabled.
3. If no valid realized container exists yet, keep `SelectedIndex = -1` and let selection be assigned later when a qualifying container is prepared.
4. Keep/strengthen the container-preparation path so that when the first visible+enabled container appears, it becomes selected.
5. Re-run the existing unit tests around `SelectingItemsControl` and `TabControl` to verify hidden/disabled/default selection behavior remains correct.

This should address the unresolved review concern and the likely failing test path for PR #20798.</plan>
