<request>

You are working on a task in the 'github/github-mcp-server' repository.

<repository_context>
I've cloned the repository in the directory /tmp/workspace/github/github-mcp-server (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-05-17T06:47:25.985+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>
Are there no missing explicit readOnlyHints?
</problem_statement>

First, determine whether the <problem_statement> requires code changes, an explanation, a plan, or analysis. Then follow the appropriate path:

If the task requires code changes:

If the task is a question or only requires creating a plan or analysis: respond directly without making code changes.

<prev_assistant>

Likely yes: the repo has a dedicated guard test (`TestToolDefinitionsRequireExplicitReadOnlyHint`) that walks all `mcp.Tool` literals under `pkg/github` and fails with a list of offenders if any tool is missing `Annotations.ReadOnlyHint` (`/tmp/

workspace/github/github-mcp-server/pkg/github/
tools_validation_test.go:198-319`).

Consider the following problem statement:

<problem_statement>
Well then can you validate https://github.com/github/github-mcp-
server/issues/2483

It seems incorrect report? If tools are all explicitly setting
it what's the problem?
</problem_statement>

First, determine whether the <problem_statement> requires code
changes, an explanation, a plan, or analysis. Then follow the
appropriate path:

If the task requires code changes:

**If the task is a question or only requires creating a plan or
analysis:** respond directly without making code changes.
