Consider the following problem statement:

<problem_statement>

This section details on the original issue you should resolve

<issue_title>maintenance(os): align package CI validation</issue_title>
<issue_description>

Generated by the maintenance inventory on 2026-05-26T08:46:01Z.

Summary

Package CI should restore, build, test, pack, and validate unless an exception is documented.

Findings

- `.github/workflows/egil-orleans-storage-ci.yml` does not contain a dedicated `run-test` job with `dotnet test`.

- `.github/workflows/egil-orleans-storage-ci.yml` hard-codes setup-dotnet SDK versions; verify they still match the retained TFMs.

```
## Suggested Agent Task

- Inspect the current package, SDK, workflow, or test-harness
docs before changing code.
- Make one focused PR for this issue.
- Keep package release-note conventions intact; use [skip notes]
for internal maintenance if needed.

## Acceptance Criteria

- [ ] The package workflow runs tests or documents why tests are
not applicable.
- [ ] CI SDK versions match the target frameworks retained by
the package.
</issue_description>
- Closes egil/framework#39
