Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Add doctrine spine controls
</pr_title>

<pr_description>
Summary
- translate owner-supplied operating influences into existing Nuclear-grade doctrine, skills, commands, templates, and adoption surfaces without adding quotes or attributions
- add a Standard packet with CM, OPEX, verification, ship, and baseline records for the doctrine-spine update
- strengthen downstream-agent controls around decision questions, grounded proof, mission alignment, two-speed work, and cut-point self-checking

Validation

- python3 tools/ng.py validate .nuclear/changes/doctrine-spine-influence
- env UV_CACHE_DIR=/tmp/uv-cache uv run --with pytest pytest tests/test_public_docs.py tests/test_skill_contracts.py tests/test_command_contracts.py tests/test_ng_validate.py -q
- python3 tools/ng.py doctor .
- rg attribution-name scan returned no tracked insertions of the owner-supplied names
- rg boundary scan reviewed expected boundary-safe hits only
</pr_description>

Comments on the PR (you are @copilot in this section)

Pull request overview

This PR threads a "doctrine-spine" set of operating influences through the existing Nuclear-grade surfaces — charter principles, public docs, skills, command prompt cards, Standard templates, and skill-evaluation prompts — without adding quotes, attributions, or new doctrine pages. It also lands a Standard packet (risk/basis/plan/trace/verification/ship + CM/OPEX/baseline) that records the change. No CLI, validator, dependency, or release-automation behavior changes.

Changes:
- Charter bumped to 1.1.0 with six new articles (decision-question discipline, operational unambiguity, mission-aligned small work, grounded truth, two-speed control, cut-point self-checking) and these are echoed in README/QUICKSTART/WORKFLOWS, lifecycle, HPI overlays, activation thresholds, evidence-spine, reviewer playbook, enterprise rollout, and agent-authority docs.
- Standard templates gain new fields/sections: `Current work phase` and `Evidence that would change the decision` in risk; `Grounding status` table in basis; `Two-speed work plan` in plan; `Support type` column in trace and verification; `Decision question answered by evidence?` and slow-audit exit criterion in ship.
- Skills and command cards (questioning-attitude, classifying-change-risk, packing-agent-context, proving-claims, self-checking-agent-actions, reviewing-ship-readiness, learning-from-opex, controlling-mission-drift, using-nuclear-grade; and ng-

question, ng-classify, ng-context-pack, ng-prove, ng-self-check, ng-ship-review, ng-opex, ng-drift-check) gain decision-question / support-type / work-phase / cut-point / mission-trace language; skill-evaluation prompts gain matching trigger lines.

<author>@copilot-pull-request-reviewer</author>
This packet was authored against the previous Standard risk template and does not include the new fields this same PR adds to `templates/standard/risk.md`: the `Current work phase: explore / candidate / audit / accept` line is missing from the Change identity block, and `Evidence that would change the decision:` is missing from the Questioning-attitude summary. Since this packet's stated purpose is to translate the doctrine spine into the Standard templates, it should be the first packet to demonstrate the new template fields.

The Release decision block is missing the new `Decision question
answered by evidence? yes/no:` line that this PR adds to
`templates/standard/ship.md` between Rationale and Conditions.
Since the packet documents acceptance for the doctrine-spine
update itself, the new field should be filled in here rather
than dropped.

<author>@copilot-pull-request-reviewer</author>
The claim-to-evidence table here uses the previous 7-column
schema and omits the new `Support type` column that this PR adds
to `templates/standard/verification.md` (fact / assumption /
unknown / source claim / local proof / decision authority). The
updated template's exit criteria explicitly require that "Each
important claim separates support type from verification type."
This packet's own table currently violates that exit criterion.

<comment_old>
<author>@copilot-pull-request-reviewer</author>
The Two-speed work plan section here uses different column headers (`Phase | Allowed speed | Gate`) than the template this PR adds to `templates/standard/plan.md`, which uses `Work phase | Allowed actions | Acceptance gate` with rows for explore / candidate / audit / accept. Since the packet's purpose is to roll out and exemplify these template changes, aligning the column headers and phase rows with the template would prevent confusion when reviewers compare the packet to the template they are now expected to follow.

<comment_old>
<author>@copilot-pull-request-reviewer</author>
This basis record is missing the new `## Grounding status` table that this PR adds to `templates/standard/basis.md`, which is intended to separate fact / assumption / unknown / source claim / local proof / decision authority before derived claims are accepted. Since this packet introduces that very control, including the new section here would make the packet a working example of the updated basis template.

<author>@copilot-pull-request-reviewer</author>
The "Activated artifacts" table omits `plan.md` and `trace.md`, but both files are present in the packet and are required for Standard mode by the validator (`nuclear_grade/ng_validate.py:19` lists `risk.md, basis.md, plan.md, trace.md, verification.md, ship.md` as required Standard files). The table should reflect that they are activated for consistency with the packet contents and the Standard-mode requirement.

> @copilot review

Completed a fresh review pass on the current PR state. The doctrine-spine packet/template alignment items are already present in commit 18e73cb, and local packet validation/doctor checks are clean (`python3 tools/ng.py validate .nuclear/changes/doctrine-spine-influence`, `python3 tools/ng.py doctor .`).

<author>@copilot</author>

> @copilot review

Reviewed again. The remaining packet inconsistency (Activated artifacts missing `plan.md`/`trace.md`) is already fixed in commit 605be21. Local checks are clean: `python3 tools/ng.py validate .nuclear/changes/doctrine-spine-influence` and `python3 tools/ng.py doctor .`.
