<current>

<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'mitodl/open-edx-plugins' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/open-edx-plugins/open-edx-plugins (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-05-26T08:15:07.442+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>
@copilot Fix the code for only this review comment.

When a review comment includes a suggested change, apply the suggestion exactly unless the instructions in the 'Additional instructions' section below indicate otherwise.

Do not make changes beyond what is described in the linked review comment, unless requested in the 'Additional instructions' section below.
</problem_statement><rules_for_making_changes>
* Start by fully understanding <problem_statement> and the <comments> before making any changes. Treat <comment_old> comments as context only and do not make changes solely to satisfy them.
* Only act on <comment_new> comments that explicitly mention you (@copilot). To understand the context of comments that explicitly mention you, you may use other comments that do not explicitly mention you. Do not act on comments that don't explicitly mention you or reply to them, even if they are marked

```
as <comment_new>.
* If the PR author has pushed back on or rejected a suggestion
in a thread, do not act on that thread.
* For each comment you decide to act on, determine:
    - If it is a request for changes, a question on the code, or
a suggestion.
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you
can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment
and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

<system_reminder>
You have the capability to call multiple tools in a single
response.
For maximum efficiency, whenever you need to perform multiple
independent operations, ALWAYS call tools simultaneously
whenever the actions can be done in parallel rather than
sequentially (e.g. multiple reads/edits to different files).
Especially when exploring repository, searching, reading files,
viewing directories, validating changes. For example, you can
read 3 different files in parallel, or edit different files in
parallel. However, if some tool calls depend on previous calls
to inform dependent values like the parameters, do NOT call
these tools in parallel and instead call them sequentially (e.g.
reading shell output from a previous command should be
sequential as it requires the sessionID).
</system_reminder>
```

<prompt>

```
@copilot Fix the code for only [this review comment](https://
github.com/mitodl/open-edx-plugins/pull/802#discussion_r3299662706).

When a review comment includes a suggested change, apply the
suggestion exactly unless the instructions in the 'Additional
instructions' section below indicate otherwise.

Do not make changes beyond what is described in the linked review
```

```
comment, unless requested in the 'Additional instructions' section
below.
```
