<prev_user>

<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'archanox/Win32Emu' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/Win32Emu/Win32Emu (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2025-11-21T04:41:10.846Z</current_datetime>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Implement missing Kernel32.dll functions: OpenEventA, GetProcessFlags, ConvertToGlobalHandle, EnumResourceNamesA
</pr_title>

<pr_description>
Issue reported 33 missing KERNEL32.DLL functions. Analysis revealed 29 were already implemented; 4 required implementation.

Changes

OpenEventA

- Opens existing named event synchronization objects
- Added `SynchronizationManager.OpenEvent()` to look up events by name
- Returns handle or NULL with `ERROR_FILE_NOT_FOUND`

GetProcessFlags
- Win95/98 undocumented function stub returning 0

ConvertToGlobalHandle
- Win16 compatibility stub (local/global heaps unified in Win32)
- Returns input handle unchanged

EnumResourceNamesA
- Added `PeResourceReader.EnumerateResourceNames()` to enumerate numeric resource IDs by type
- Returns `TRUE` when resources found, `FALSE` with `ERROR_RESOURCE_TYPE_NOT_FOUND` otherwise
- **Limitation**: Callback invocation not implemented (logs resources only); string-named resources skipped

```csharp
// Usage pattern
var resources =
_resourceReader.EnumerateResourceNames(RT_BITMAP);
if (resources != null) {
    foreach (var id in resources) {
        // Resource ID available for loading
    }
}
```

All functions follow existing error handling patterns with proper LastError codes.

* For each new comment, determine:
    - If it a request for changes, a question on the code or a suggestion.
    - Is it addressed to you or someone else, e.g. "Hey @username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

Ensure that you lint, build and test early and iteratively to validate each code change thoroughly.

<prev_assistant>

Perfect! I've successfully addressed the comment by:

1. **Analyzed the winevdm reference implementation** that the user provided
2. **Updated GetProcessFlags** to include:
   - Proper PDB32 flag constants (CONSOLE_PROC, FILE_APIS_OEM, DEBUGGED)
   - Process ID validation (returns 0 if querying different process)
   - Clear documentation based on the reference

   - TODO comments for future enhancements (subsystem detection, debugger support)
3. **Built and verified** the changes compile successfully
4. **Committed and pushed** the changes
5. **Replied to the comment** with a concise explanation of what was done and the commit hash

The implementation is now more accurate and follows the Win95/98 PDB structure, though it still returns 0 since we don't currently track subsystem information or debugger state in the emulator. This is documented with TODO comments for future improvements.

<pr_title>
Implement missing Kernel32.dll functions: OpenEventA, GetProcessFlags, ConvertToGlobalHandle, EnumResourceNamesA
</pr_title>

<pr_description>
Issue reported 33 missing KERNEL32.DLL functions. Analysis

````
revealed 29 were already implemented; 4 required implementation.

## Changes

### OpenEventA
- Opens existing named event synchronization objects
- Added `SynchronizationManager.OpenEvent()` to look up events
by name
- Returns handle or NULL with `ERROR_FILE_NOT_FOUND`

### GetProcessFlags
- Win95/98 PDB (Process Database) function based on <a
href="https://github.com/otya128/winevdm/blob/master/krnl386/
stub.c">winevdm reference implementation</a>
- Validates process ID (returns 0 for different process queries)
- Defines PDB32 flag constants: `PDB32_CONSOLE_PROC` (0x01),
`PDB32_FILE_APIS_OEM` (0x02), `PDB32_DEBUGGED` (0x04)
- Currently returns 0 (no flags set) with TODOs for future
subsystem detection and debugger support

### ConvertToGlobalHandle
- Win16 compatibility stub (local/global heaps unified in Win32)
- Returns input handle unchanged

### EnumResourceNamesA
- Added `PeResourceReader.EnumerateResourceNames()` to enumerate
numeric resource IDs by type
- Returns `TRUE` when resources found, `FALSE` with
`ERROR_RESOURCE_TYPE_NOT_FOUND` otherwise
- **Limitation**: Callback invocation not implemented (logs
resources only); string-named resources skipped

```csharp
// Usage pattern
var resources =
_resourceReader.EnumerateResourceNames(RT_BITMAP);
if (resources != null) {
    foreach (var id in resources) {
        // Resource ID available for loading
    }
}
```

All functions follow existing error handling patterns with
proper LastError codes.

<comment_old>
<author>@copilot</author>

&gt; @copilot i found an implementation of GetProcessFlags here
https://github.com/otya128/winevdm/blob/master/krnl386/stub.c

Updated GetProcessFlags implementation based on the winevdm
reference. The function now:
- Validates process ID (returns 0 for different process)
- Defines PDB32 flag constants (CONSOLE_PROC, FILE_APIS_OEM,
DEBUGGED)
- Includes TODOs for subsystem detection and debugger support

Currently returns 0 (no flags set) as we don't yet store
subsystem information in ProcessEnvironment. Commit: 6e18d21
