<request>

You are working on an issue in the 'weDevsOfficial/wp-user-frontend' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/wp-user-frontend/wp-user-frontend (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-05-05T06:11:47.016+00:00</current_datetime>

Consider the following problem statement:

<problem_statement>

This section details on the original issue you should resolve

<issue_title>Security incident: PolinRider malware found in this repo</issue_title>
<issue_description>**This repository has been compromised with malware (PolinRider).**

<img src="https://github.com/user-attachments/assets/bf25ade1-32de-48c2-ad33-450ea00b80ef">

Direct link to code

What happened

A malicious actor gained access to this repository and injected malware into the codebase. The malware family has been identified as **PolinRider**, which is known to steal credentials, secrets, and environment variables from infected

```
machines.

### Who is affected

If you have run the latest version of this code, **you should
consider your machine and any tokens, secrets, or credentials
present on it to be compromised.** This includes but is not
limited to:

- API keys and access tokens
- SSH keys
- Environment variables
- Cloud credentials (AWS, GCP, Azure, etc.)
- NPM, PyPI, or other registry tokens

### Immediate actions to take

1. **Rotate all credentials** that were present on any machine
that ran the affected code
2. **Revoke and reissue** any tokens, API keys, or secrets
3. **Audit access logs** for any of your services for suspicious
activity
4. **Scan your machine** for further signs of compromise
</issue_description>
