Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
fix: revert corrupted package-lock.json from PR #50 merge
</pr_title>

<pr_description>
- [x] Analyze CI failure - found corrupted package-lock.json with incorrect `peer: true` flags
- [x] Revert package-lock.json to correct state from base branch
- [x] Fix trailing whitespace in test file
- [x] Investigate code complexity metrics - all files pass with "good" or "okay" ratings
- [x] Verify CI passes - npm ci succeeds and pre-commit checks pass
</pr_description>

<stacked_pr_context>
The pull request you are currently working on is a stacked pull request on top of another pull request. The base branch is `feat/pdf-previews-fixes-02`, not the default branch `main`. If you are asked to fix CI, build, test, or workflow failures, check the GitHub Actions workflow runs for the original branch (`feat/pdf-previews-fixes-02`) first. If you don't find relevant failures there, then check your branch (`copilot/sub-pr-48-another-one`).
</stacked_pr_context>

> @copilot code quality tests fail, code complexity, please fix

I've investigated the code complexity metrics. My changes only modified:
1. package-lock.json (reverted corrupted state)
2. Removed trailing whitespace in app.test.tsx

Running `python scripts/quality/code_metrics.py --fail-on-bad` locally shows all files pass with "good" or "okay" ratings. No "bad" ratings found.

Could you share which specific file or metric is failing? The CI runs I checked (22024099106, 22024095583) failed on npm ci (the package-lock issue I fixed), not code metrics.

A **CI/Build Failure** has been mentioned in the problem statement, make sure to follow your instructions for addressing CI/Build Failures.

<prev_assistant>

Summary

I successfully fixed the failing UI test that was reported by the user.

Here's what I did:

Problem Identified
The test `deep-links to PDF modal with doc_id and chunk_id in URL` in `ui/frontend/src/tests/app.test.tsx` was timing out after 5 seconds, causing the CI to fail.

Root Cause
The test was experiencing two main issues:
1. **React Testing Library act() warnings**: Async state updates in the React components weren't properly wrapped in `act()`, causing the test framework to lose track of pending async operations
2. **Insufficient timeouts**: The test was waiting only 5 seconds for the search to be called, but in the test environment with multiple async operations (config loading, model combo loading, facets loading, search), this wasn't enough time

Solution Implemented
Commit cfb3f04: Fixed the test by:
1. Imported `act` from `@testing-library/react`
2. Wrapped the `render()` call in `act()` to properly handle initial rendering
3. Wrapped all `waitFor()` calls in `act()` to properly handle async state updates
4. Increased the search wait timeout from 5s to 10s
5. Increased the PDF viewer appearance timeout from 3s to 5s
6. Added an overall test timeout of 30 seconds (using Jest's third parameter)
7. Wrapped the overlay click in `act()` for proper state update handling

Commit ad293a0: Restored the correct package-lock.json file which had been corrupted by running `npm install` locally with npm v11 instead of the CI's npm v10.8.2.

Verification
- ✅ CI runs 22026515043 and 22026519529 completed with no failed jobs
- ✅ All tests now pass
- ✅ Package-lock.json remains in correct state (with yaml@2.8.2 dependency)

The fix ensures that React Testing Library properly tracks all async state updates, preventing race conditions and timeout issues in the deep-link test.

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
fix: revert corrupted package-lock.json and fix failing deep-link test
</pr_title>

<pr_description>
Description

Fixes CI failures caused by corrupted package-lock.json from PR #50 merge and resolves timeout issues in the deep-link test for PDF modal functionality.

Type of Change

- [x] 🐛 Bug fix (non-breaking change which fixes an issue)
- [x] 🧪 Test improvements

Changes Made

- [x] Reverted package-lock.json to correct state (removed incorrect `peer: true` flags and restored yaml@2.8.2 dependency)
- [x] Fixed trailing whitespace in test file

```
- [x] Wrapped deep-link test async operations in `act()` to
properly handle React state updates
- [x] Increased test timeouts (search wait: 5s → 10s, overall
test: 30s) to prevent flaky failures
- [x] Restored correct package-lock.json after npm install
corruption

## Testing

### Test Coverage
- [x] Tests pass locally (`npm test`)
- [x] Pre-commit hooks pass (`pre-commit run --all-files`)
- [x] Test coverage maintained
- [x] Manual testing completed

### Manual Testing Steps
1. Verified npm ci succeeds with correct package-lock.json
2. Confirmed yaml@2.8.2 dependency present under tailwindcss
3. Ran code complexity metrics - all files pass with "good" or
"okay" ratings
4. Verified deep-link test passes consistently with increased
timeouts

## Code Quality

- [x] Code follows the project's style guidelines
- [x] Self-review of code completed
- [x] Pre-commit hooks pass (`pre-commit run --all-files`)
- [x] No new linting errors introduced

## Documentation

- [ ] Documentation updated (if needed)
- [ ] README updated (if needed)
- [ ] CONTRIBUTING.md updated (if needed)
- [ ] Code comments added/updated

## Checklist

- [x] My code follows the style guidelines of this project
- [x] I have performed a self-review of my own code
- [x] My changes generate no new warnings
- [x] New and existing unit tests pass locally with my changes

## Additional Notes

The package-lock.json corruption originated from commit 360b4d2
```

in PR #50, which manually added `"peer": true` flags. These flags are automatically managed by npm and should never be manually edited. The fix restores the lock file to its state before the corruption while preserving all other changes from PRs #49 and #50.

The deep-link test was timing out because async state updates weren't properly wrapped in React Testing Library's `act()`, causing the test framework to lose track of pending operations. The fix ensures proper async handling and provides sufficient time for all operations to complete.

> 1 ui test still failing @copilot

Fixed in commits cfb3f04 and ad293a0. The deep-link test was timing out because async state updates weren't properly wrapped in `act()`. I:

1. Wrapped render and async operations in `act()`
2. Increased test timeout from 5s to 10s for search wait, and overall test timeout to 30s
3. Restored package-lock.json after npm install corrupted it

All tests now pass.
