<current>

<request>

You are working on an issue in the 'managedcode/markitdown' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/markitdown/markitdown (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

Consider the following problem statement:

<problem_statement>

This section details on the original issue you should resolve

<issue_title>Fix await</issue_title>
<issue_description>Looking at you PdfConverter.cs, line: 274.

The Task,Run does not make sense here. There is no point on freeing up current thread with await/async and offloading work to another thread. Work still has to be done, does not matter on which thread you do it. It's like taking $2 from left pocket and putting it into right pocket. You still have same amount of money. But you wasted effort on actually doing it (aka switching threads).

It only makes sense when you want to make main thready responsive. Aka GUI thread. So person does not get a feeling that app is frozen. But this is not the case here. There is no GUI.

so looks liek we have to rewniew all asyn-await usage</

</problem_statement>
```

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.

Ensure that you lint, build and test early and iteratively to validate each code change thoroughly.
