<current>

<request>

You are working on an issue in the 'oocx/tfplan2md' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/tfplan2md/tfplan2md (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-01-13T18:25:45.004Z</current_datetime>

Consider the following problem statement:

<problem_statement>
Problem

The CI workflow is failing when publishing test results with a permission error:

```
Request GET /repos/oocx/tfplan2md/commits/3f6c1e438e479302034aa024c471767dc4667d7a/pulls?per_page=100 failed with 403: Forbidden
```

The `EnricoMi/publish-unit-test-result-action@v2` action tries to fetch pull requests associated with the commit, but the workflow doesn't have the necessary `pull-requests: read` permission.

Solution

Update `.github/workflows/ci.yml` to add `pull-requests: read` permission to the permissions block.

Current permissions (lines 14-16):
```yaml
permissions:
  contents: write
```

```
  checks: write
```

Should be updated to:
```yaml
permissions:
  contents: write
  checks: write
  pull-requests: read
```

This will allow the publish-unit-test-result-action to read PR information without encountering a 403 Forbidden error.

Files to modify

- `.github/workflows/ci.yml` - Add `pull-requests: read` to the permissions block
</problem_statement>

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.

A **CI/Build Failure** has been mentioned in the problem statement, make sure to follow your instructions for addressing CI/Build Failures.
