<request>

You are working on an issue in the 'usethis-python/usethis-python' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/usethis-python/usethis-python (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-04-07T09:12:48.295Z</current_datetime>

Consider the following problem statement:

<problem_statement>

This section details on the original issue you should resolve

<issue_title>Don't strictly require git in `usethis tool pre-commit`</issue_title>
<issue_description>**Motivation**
We might still want `pre-commit` e.g. for CI without installing it locally. So we shouldn't hard-fail if git isn't installed, we should just display a message explaining how to handle the situation.

Summary of desired enhancement
Don't strictly require git to be able to run `usethis tool pre-commit`
</issue_description>

Comments on the Issue (you are @copilot in this section)

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
[WIP] Remove strict git requirement in usethis tool pre-commit
</pr_title>

<pr_description>
- [x] Add `_is_git_repo()` helper to `src/usethis/_integrations/pre_commit/core.py`
- [x] Modify `install_pre_commit_hooks()` to check for git availability before running, showing an informational message + install instruction instead of failing
- [x] Modify `uninstall_pre_commit_hooks()` similarly for the uv/poetry backends
- [x] Update `test_err` tests (renamed to `test_no_git_repo`) to verify graceful no-error behaviour with info message
- [x] Add `_is_git_repo` mock to backend-specific tests so subprocess paths are still exercised
- [ ] Run static checks (pre-existing AGENTS.md size issue unrelated to this PR; docs/functions.txt and AGENTS.md sync updates pending)

Resolves #1862
</pr_description>

The last **3** git commits in this branch are the changes you have made so far. Use those as your change commit history.
</problem_statement><rules_for_making_changes>
* Start by fully understanding <problem_statement> and the <comments> before making any changes. You will only address the <comment_new> comments. Reply to new comments as you address them. Ignore comments that are not actionable or directed at you.
* For each new comment, determine:
    - If it a request for changes, a question on the code or a suggestion.
    - Is it addressed to you or someone else, e.g. "Hey

```
@username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you
can stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment
and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

A **CI/Build Failure** has been mentioned in the problem
statement, make sure to follow your instructions for addressing
CI/Build Failures.
```
