<current>

<request>

You have been given comments on the previous commits you made in the repository.

You are working on an issue in the 'InvoicePlane/InvoicePlane-v2' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/InvoicePlane-v2/InvoicePlane-v2 (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2025-12-30T17:24:02.957Z</current_datetime>

Consider the following problem statement:

<problem_statement>

This section includes details on the pull request with code changes you have already submitted to fix the problem above.

<pr_title>
Just develop to master
</pr_title>

<pr_description>

✨ Let Copilot coding agent set things up for you — coding agent works faster and does higher quality work when set up for your repo.

```
</pr_description>

<author>@nielsdrost7</author>
@copilot the phpstan.yml can be adjusted by really looking at
the output of a phpstan scan and acting on it or interpreting
it:

## What *actually* works well in practice

### Recommended local → GitHub workflow

```bash
vendor/bin/phpstan analyse --error-format=json > phpstan.json
```

Then:
```

```
* Use `jq` / script to:

  * Group by class
  * Strip noise
  * Generate TODOs
* Feed **that trimmed output** into Copilot
* Or generate:

  * Markdown checklist
  * Baseline file
  * PR comment

This is exactly what you were doing manually — just formalized.

---

## If your goal is “Copilot understands it”

Copilot works best with:

* **JSON**
* **Trimmed context**
* **Explicit instructions**

So your mental model is correct:

&gt; “PHPStan should have caught that”
&gt; → means **don’t show full traces, show intent**

PHPStan JSON + your prompt = best signal-to-noise ratio.

  <author>@nielsdrost7</author>
  @copilot either the composer.lock file is out of sync or
  something needs to be done about that composer vendor
  cleaner package:

  ```
  Run composer install --no-interaction --prefer-dist --
```
```

```
optimize-autoloader
Installing dependencies from lock file (including require-
dev)
Verifying lock file contents can be installed on current
platform.
Warning: The lock file is not up to date with the latest
changes in composer.json. You may be getting outdated
dependencies. It is recommended that you run `composer
update` or `composer update <package name>`.
- Required package "liborm85/composer-vendor-cleaner" is not
present in the lock file.
This usually happens when composer files are incorrectly
merged or the composer.json file is manually edited.
Read more about correctly resolving merge conflicts https://
getcomposer.org/doc/articles/resolving-merge-conflicts.md
and prefer using the "require" command over editing the
composer.json file directly https://getcomposer.org/doc/03-
cli.md#require-r
Error: Process completed with exit code 4.
```

or both.
And right now even `composer install` doesn't work
</comment_new>

</pr_comments>

</comments>

The last **64** git commits in this branch are the changes you have made so far. Use those as your change commit history.
</problem_statement>

Analyze and determine if action or explanation is needed
<rules_for_making_changes>
* Start by fully understanding <problem_statement> and the <comments> before making any changes. You will only address the <comment_new> comments. Reply to new comments as you address them. Ignore comments that are not actionable or directed at you.
* For each new comment, determine:
    - If it a request for changes, a question on the code or a suggestion.
    - Is it addressed to you or someone else, e.g. "Hey @username, ..." or "@username can you ...".
    - Is it a general comment or praise.
* If there are no comments you need to address or reply to, you can

stop now without exploring or explaining yourself.
* If the user's ask is not clear, you can reply to the comment and ask for clarification.
* If an action or explanation is needed, follow the steps below.
</rules_for_making_changes>

A **CI/Build Failure** has been mentioned in the problem statement, make sure to follow your instructions for addressing CI/Build Failures.

<prompt>

@copilot either the composer.lock file is out of sync or something needs to be done about that composer vendor cleaner package:

```
Run composer install --no-interaction --prefer-dist --optimize-autoloader
Installing dependencies from lock file (including require-dev)
Verifying lock file contents can be installed on current platform.
