<request>

You are working on an issue in the 'nervosnetwork/ckb' repository.

<repository_context>
I've cloned the repository in the directory /home/runner/work/ckb/ckb (not in /tmp/inputs). Always use absolute paths when referring to files in the repository.
</repository_context>

<current_datetime>2026-03-03T03:32:20.082Z</current_datetime>

Consider the following problem statement:

<problem_statement>
Fix the release error:

```
Error: failed to release package
Caused by:
    failed to publish ckb-instrument:     Updating crates.io index
       Packaging ckb-instrument v1.1.0 (/home/runner/work/ckb/ckb/util/instrument)
        Updating crates.io index
        Packaged 9 files, 131.8KiB (34.1KiB compressed)
       Verifying ckb-instrument v1.1.0 (/home/runner/work/ckb/ckb/util/instrument)
       Compiling ckb-store v1.1.0
       Compiling ckb-verification v1.1.0
       Compiling ckb-reward-calculator v1.1.0
       Compiling ckb-snapshot v1.1.0
       Compiling ckb-migrate v1.1.0

    Some errors have detailed explanations: E0425, E0599.
    For more information about an error, try `rustc --explain
  E0425`.
    warning: `ckb-instrument` (lib) generated 8 warnings
    error: could not compile `ckb-instrument` (lib) due to 3
  previous errors; 8 warnings emitted
    warning: build failed, waiting for other jobs to finish...
    error: failed to verify package tarball

  Error: Process completed with exit code 1.
  ```
  </problem_statement>
```

Implement the necessary changes to the repository so that the requirements specified in the <problem_statement> are met.

A **CI/Build Failure** has been mentioned in the problem statement, make sure to follow your instructions for addressing CI/Build Failures.
```

<prev_assistant>

The fix is complete. Here's a summary of the changes:

Summary

The `ckb-instrument` crate failed to compile during `cargo publish` because `progress_bar` is an optional feature (not enabled by default), but several code paths assumed it was always available.

Changes Made

`util/instrument/src/export.rs` — Split the iterator chain so `.progress_with()` is only called when the feature is enabled:
```rust
let iter = chunk.collect::<Vec<_>>().into_par_iter();
#[cfg(feature = "progress_bar")]
let iter = iter.progress_with(progress_bar_clone.clone());
iter.try_for_each(...)
```

`util/instrument/src/import.rs` — Removed the `#[cfg(feature = "progress_bar")]` gate from the `read_from_json` method itself (so it always exists), and instead gated only the progress bar creation and usage within the method body:
- Progress bar creation (`ProgressBar::new(...)`) — gated with `#[cfg(feature = "progress_bar")]`
- Verify callback — two versions: one with progress bar increment, one without
- `progress_bar.finish_with_message("done!")` — gated with `#[cfg(feature = "progress_bar")]`

This fixes all 3 compilation errors and 8 unused import warnings from the original issue.

Security Summary
No security vulnerabilities were introduced. The changes are purely conditional compilation (`#[cfg]`) annotations with no new logic, dependencies, or external input handling.
